Assignment – 14.2

Name: AlliHarika
Batch: 21
Ht.no: 2303A510I7

Lab 14: Web Design Application – AI-Assisted HTML/CSS/JS Generation

Lab Objectives

• Design functional, visually appealing web applications using HTML, CSS, and JavaScript with AI assistance.
• Apply responsive, accessible, and interactive design principles.

Week 7 - Tuesday

• Create practical UI components for real-world web applications.
• Use AI to optimize layout, UX, and performance.

Task Description 1 – (Landing Page Design)

• Create a simple landing page for a product or service. Include a header, hero section, and footer.

Requirements:

• Use HTML and CSS to structure the page.
• Use AI to suggest layout alignment and typography.
• Ensure the page is responsive across devices.

PROMPT: "Generate a simple, responsive landing page with header, hero section, and footer using HTML & CSS. Use modern typography and clean layout."

    <style>
        body {
            margin: 0;
            font-family: 'Arial', sans-serif;
            color: #333;
        }
        header {
            background-color: #4CAF50;
            color: white;
            padding: 20px;
            text-align: center;
        }
        .hero {
            display: flex;
            flex-direction: column;
            align-items: center;
            justify-content: center;
            height: 80vh;
            background-color: #f4f4f4;
            text-align: center;
        }
        .hero h1 {
            font-size: 3em;
            margin-bottom: 20px;
        }
```

Welcome to Our Landing Page

Your Journey Starts Here

Discover our amazing products and services that can help you achieve your goals.

Get Started
```

1. Observation: The AI generated a clean and responsive webpage layout using semantic HTML tags like header, section, and footer.
2. It automatically applied modern design patterns such as spacing, typography alignment, and color consistency.
3. AI used media queries to ensure responsiveness across mobile and desktop screens.
4. This task shows how AI simplifies UI structuring and reduces manual design effort.

Task Description -2(Theme Toggle Feature)

• Provide a button to switch between light and dark themes..

Requirements:

• Use JavaScript to toggle CSS classes.

• Use AI assistance to manage color contrast and accessibility.

• Ensure theme preference applies instantly on click.

Prompt:

“Add a JavaScript button that toggles between light and dark theme by switching CSS classes.

Observation:

1. The AI implemented a simple and effective light/dark theme switch using JavaScript class toggling.
2. It ensured proper color contrast between themes, improving accessibility and readability.
3. The code is minimal, efficient, and provides instant visual feedback to the user.

4. This demonstrates AI's ability to handle interactive UI behavior with clean logic.

Task Description 3 – (User Feedback Form)

• Create a feedback form with fields: Username, Rating, Comments.

Requirements:

• Use JavaScript to validate required fields.

• Display success or error messages dynamically.

• Use AI to improve form usability and layout.

Prompt:

"Create a feedback form with validation and dynamic success/error messages using JavaScript."

```
#"Create a user feedback form with JavaScript validation. Fields: Username, Rating, Comments. Show success/error dynamically."
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>User Feedback Form</title>
    <style>
        body {
            font-family: Arial, sans-serif;
            margin: 20px;
        }
        .form-group {
            margin-bottom: 15px;
        }
        .error {
            color: red;
        }
        .success {
            color: green;
        }
    </style>
</head>
<body>

    <h1>User Feedback Form</h1>
    <form id="feedbackForm">
        <div class="form-group">
            <label for="username">Username:</label>
            <input type="text" id="username" name="username">
        </div>
        <div class="form-group">
```

You have Docker installed on your system. Do you want to install the recommended extensions from Microsoft for it?

#"Create a user feedback form with JavaScript validation. Fields: Username, Rating, Comments. Show success/error dynamically."

User Feedback Form

Username:

Rating (1-5):

Comments:

Submit Feedback

Observation:

1. AI created a structured feedback form with clear input fields and placeholders for better usability.
2. It added JavaScript validation to prevent empty or incorrect submissions.
3. Dynamic success/error messages improve user interaction and make the form more user-friendly.
4. This task highlights AI's capability in generating practical, user-centered form handling logic.

Task Description - 4 (Image Gallery with JavaScript)

• Task: Display a small image gallery on a web page.

Requirements:

• Use JavaScript to dynamically load images.

• Add next/previous navigation buttons.

• Use AI to optimize layout responsiveness.

Prompt: "Develop an image gallery that switches images using next and previous buttons**."**

Observation:

1. The AI designed a functional image gallery using an array and next/previous navigation logic.
2. Modulo operations ensure smooth image cycling without errors.
3. Responsive image styling ensures the gallery works well on all screen sizes.
4. This shows AI's ability to implement dynamic UI components using clean and optimized JavaScript**.**

Task Description - 5: (Notification Banner)

• Display a notification banner at the top of the page.

Requirements:

• Use JavaScript to show and hide the banner.

• Style the banner using CSS.

• Use AI to ensure smooth transitions and clean UI behavior.

Prompt:

"Create a notification banner with show/hide functionality and smooth animation."

```
#"Create a top notification banner with show/hide using JavaScript. Use smooth transitions and clean UI."
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">

            top: 0;
            left: 0;
            width: 100%;
            background-color: #4CAF50;
            color: white;
            text-align: center;
            padding: 15px 0;
            box-shadow: 0 2px 5px rgba(0,0,0,0.3);
            transform: translateY(-100%);
            transition: transform 0.5s ease-in-out;
        }
        .notification-banner.show {
            transform: translateY(0);
        }
        .close-btn {
            position: absolute;
            right: 20px;
            top: 15px;
            background-color: transparent;
```

You have Docker installed on your system. Do you want to install the recommended extensions from Microsoft for it?

Observation:

1. AI created a visually appealing banner with a smooth hide animation using CSS transitions.
2. The mechanism uses class-based toggling for better code maintainability.
3. The banner displays the message clearly without affecting user interaction flow.
4. This task demonstrates AI's capability to integrate UI micro-interactions efficiently.
